

## **Ohio Department of Insurance Creates Automobile Insurance Sample Premium Calculator**

Have you ever wondered if your automobile insurance premium could be lower with another insurance company or speculated on how much your automobile premium would change if you moved? What about how your credit rating affects your auto premium? The Ohio Department of Insurance's new Automobile Insurance Sample Premium Calculator may help resolve some of your guesswork.

This new resource can be used to view and compare sample premiums voluntarily provided by various insurance companies and obtain contact information for these companies.

Here is how it works:

- You select personal information, including where you live, how you use your car and the coverage you want. This information is considered when insurance companies determine the rates they charge.
- Once the information has been entered, you select "Get Sample Premiums." A list of the participating companies and their sample premium estimates will appear on the results page.
- The results page includes sortable columns with information including company name, phone number, email address, annual premium and the date the premiums were last updated.

The actual premium is based on your circumstances and could be higher or lower than the sample premium quotes shown. You are encouraged to contact the insurance company or an insurance agent directly to receive an exact premium quote. There are also educational links and information in a "helpful links" box to help you research insurance companies and shop for the insurance that suits your needs.
